- Individual Buffer Vials and Sterile Swabs:
Helps in testing multiple individuals simultaneously.

Sienna COVID-19 Antigen Rapid Test Kit

During the testing process, the extracted specimen reacts with the antibody of the SARS-CoV-2 nucleocapsid protein that are coated onto particles. The mixture migrates into the membrane to react with the antibody for the SARS-CoV-2 nucleocapsid protein on the membrane and will generate one colored line in the test regions. The presence of this colored line in the test regions indicates a positive result. A colored line will always appear in the control region to serve as a procedural control if the test has been performed correctly.
